

ATIVIDADE 03

Print da execução do código

The image shows a screenshot of an IDE window titled "atividade-03.dart 2 x". The code is written in Dart and defines a function `printMessage` and a `main` function. The `main` function spawns an isolate that calls `printMessage` with the string "Kailane". The IDE interface includes a toolbar with icons for running, debugging, and other actions. At the bottom, there are tabs for "PROBLEMAS", "SAÍDA", "CONSOLE DE DEPURAÇÃO", "TERMINAL", and "COMENTÁRIOS". The "CONSOLE DE DEPURAÇÃO" tab is active, showing the output of the program: "Connecting to VM Service at ws://127.0.0.1:50685/AloxuS0Jgb0=/ws" and "Mensagem do isolado: Kailane".

```
1
2 import 'dart:io';
3 import 'dart:async';
4 import 'dart:isolate';
5
6 void printMessage(message){
7   print("Mensagem do isolado: $message");
8 }
9
10 void main() async {
11   final receivePort = ReceivePort();
12   final isolate = await Isolate.spawn(printMessage, "Kailane");
13
14   await receivePort.first;
15
16   receivePort.close();
17   isolate.kill();
18 }
```
